

Jotashield

Product description

Type

An exterior premium paint is 100% pure acrylic weather-resisting.

Features and benefits

Also has low dirt pick-up and excellent alkali, algae and fungus resistance, plus excellent coverage for decorating and for superior protection against all weather elements.

Recommended use

For exterior application

Substrate

On concrete and masonry surfaces.

Product data

Packaging size	Packing may vary from country to country according to local requirements.
Colours	As per the colour card and available in Jotun Multicolor tinting system (Exterior range).
Solids	39 ± 2 volume%

Application data

Remarks

Handle with care. Stir well before use.

Application methods

By brush, roller, airless spray or conventional spray.

Guiding data for airless spray

Nozzle tip	0.021" - 0.027"
Spray angle degrees	65-80°
Pressure at nozzle	140 - 190 kg/cm ² (2100 psi)

Conditions during application

The temperature of the substrate should be minimum 10 °C and at least 3 °C above the dew point of the air, measured in the vicinity of the substrate. Good ventilation is usually required in confined areas to ensure proper drying.

Recommended film thickness per coat

Dry	Minimum	30 µm
Dry	Maximum	40 µm
Dry	Typical	35 µm
Wet	Minimum	75 µm
Wet	Maximum	100 µm
Wet	Typical	87 µm

Film thickness will vary and is calculated as average.

Spreading rate per coat

Theoretical Spreading rate per coat (m²/l) : 9.75 - 13

Spreading rate depends on film thickness applied, type of texture, surface porosity, imperfections, temperature, wastage during painting etc.

Thinner

Water

Dilution

The paint is ready to use after proper stirring. If thinning is required, water may be added up to a maximum of 5%.

Drying times

Drying times are generally related to air circulation, temperature, film thickness and number of coats, and will be affected correspondingly. The figures given in the table are typical with:

Good ventilation (Outdoor exposure or free circulation of air)

Typical film thickness

One coat on top of inert substrate

The given data must be considered as guidelines only. The actual drying time and time before recoating may be shorter or longer, depending on the ambient temperature, film thickness, ventilation, humidity, underlying paint system, requirement for early handling and mechanical strength etc.

1. Recommended data given is, for recoating with the same generic type of paint.
2. In case of multi-coat application, drying times will be influenced by the number and sequence and by the total thickness of previous coats applied.
3. The surface should be dry and free from any contamination prior to application of the subsequent coat.

Relative Humidity (RH)	50 %	50 %	50 %
Substrate temperature	10 °C	23 °C	40 °C
Surface (touch) dry	2 h	1 h	0.5 h
Hard dry	12 h	8 h	6 h
Dried to over coat, minimum	4 h	2 h	1 h

Directions for use

Surface preparation

The substrate must be sound, clean, dry and free from dust, oil, grease, laitance etc. All traces of foam release agents must be removed. A light sanding with suitable abrasive material is recommended before application. Any resulting dust/loose particles must be removed.

Recommended paint system

Primer

Cito Primer 09 or Jotashield Primer : 1 Coat(s)

Topcoat

Jotashield : 2 Coat(s)

Storage

The product must be stored in accordance with national regulations. Keep the containers in a dry, cool, well ventilated space and away from sources of heat and ignition. Containers must be kept tightly closed. Handle with care.

Health and safety

Please observe the environmental and precautionary notices displayed on the container.

A Material Safety Data Sheet for the product has been issued.

Detailed information regarding health- and safety risks and precautions for the use of this product is specified in the product's Safety Data Sheet.

First-aid measures, refer to section 4.

Handling and storage, refer to section 7.

Transport information, refer to section 14.

Regulatory information, refer to section 15.
